Garden Retail Market – spend & channel share

This factsheet presents a snapshot of consumer spend on different garden categories across six different sales channels within the UK. Figure 1 shows the total spend in 2023 across different garden product categories. In 2023, UK adults spent almost £2billion on outdoor plants, and a further £700million on houseplants. These core categories underpin the sale of other related gardening products such as tools, pots and containers. Table 1 shows that in 2023, garden centres were the largest channel for buying gardening-related products such as compost, plant pots and plants. Meanwhile, the internet was the largest channel for consumers spending on garden leisure or maintenance products such as furniture, tools, lawnmowers and BBQs. Table 2 shows the cumulative spend in each sales channel across all of the product categories, with garden centres leading the way accounting for 34% of total garden retail spend in 2023.

Methodology

The data in the tables and charts is based on HTA’s Annual Consumer Survey, 2023, with a nationally representative sample of 4,023 UK adults. As survey data is based on respondent recall, data triangulation was carried out with the final numbers produced across various sources such as Mintel’s Garden Product Retailing 2023 report and the HTA’s Garden Retail Monitor data of sales in the garden centre channel. Data comparison with 2022 Annual Consumer Survey was also carried out to sense check-the category market sizes and shares.

Notes on Methodology

As the market size figures are based on consumer recall via a survey, £ figures reported are likely are inclusive of VAT. A garden centre was defined in our consumer survey as a specialist garden centre/retail nursery, not including any garden section of DIY/supermarket stores.
