Category	Trees	
Plant Name	Taxodium distichum Lindsey's Skyward'	
Entrant	Profitplant	
Breeder	Boomkamp	
Description	Taxodium distichum 'Skyward', also known as 'Lindsey's Skyward', is a strongly columnar-growing cultivar of the bald cypress. Its sturdy branches create a very symmetrical and narrow form. The plant eventually reaches approximately 1.5–2 metres in width and around 7.5 metres in height. The fine needles emerge fresh green in spring and develop a beautiful coppery autumn colour before falling. Skyward has strong branching, resulting in a dense and compact appearance.	
Special Qualities which Benefit the Consumer	Position: prefers moist but well-drained soil with a slightly acidic pH. Suitable for full sun or partial shade. Suitable for small, medium-sized and large gardens. Tolerant of paved environments. Pruning is not necessary, although it tolerates pruning well. Suitable for wetter planting locations.	
Additional remarks	Low susceptibility to pests and diseases. Tolerant of wet conditions and paved environments.

Category	Trees	
Plant Name	Apple (Malus domestica) Legacy™	
Entrant	Frank P Matthews Ltd	
Breeder	Andrew Wright	
Description	<p>This special Apple is a highly attractive colour sport of the highly regarded Pinova apple which is renowned for disease resistance, annual productivity and long natural home storage with a firm snappy crunch and excellent sweet and aromatic profile. This full complex flavour has an abundance of citrus tones very pleasing to a broad spectrum of apple lovers. The compact growth habit is ideal for gardens and its attractive mid to late season flowers ensure a full on crop every year. It is naturally resistant to scab making it a health tree. One of the most unique characteristics is that the apples hang on the tree nearly all winter (up to mid-January) so it naturally stores on the tree rather owners having to find space to store all the apples. This means it can be enjoyed fresh from the tree nearly all winter, after this, the apple can be enjoyed by birds such as field fairs and the like. A great garden apple and organic growing. Released together with the National Garden Scheme Charity. Proceeds will be donated for each tree sold. Apple blossom in spring is abundant and fantastic for pollinators. Available on a selection of rootstocks for all spaces including dwarf rootstocks for patio growing or small spaces.</p>	
Special Qualities which Benefit the Consumer	<p>An excellent quality and extremely healthy apple with a sweet, aromatic flavour, crunchy, crisp and juicy. A very versatile apple, can be eaten fresh, cooked and makes excellent juice. Pick from mid-October and then through the winter until mid/end of January with natural storage on the tree negating needing extra space for storage. Frost resistant flowers are great for pollinators. A range of rootstocks to suit all soils, sites and heights requirements, grown in pots or open ground and will grow easily in all parts of the UK. Mid-season flowering so will cross pollinate with the most apples.</p>	
Additional remarks	<p>Can be planted in a wide range of soils and sites. No notable pest or diseases.</p>

Category	Trees	
Plant Name	Cercis griffithii Blue Lagoon ('RAFMAR 1'PBR)	
Entrant	Branded Garden Products	
Breeder	Raf Lenaerts	
Description	Cercis Blue Lagoon represents a colour breakthrough; the first grey-blue foliage ever seen in Cercis. This innovation transforms it from a spring bloomer into a full-season design feature, offering a cool, contemporary palette suited to modern gardens. It's also climate resilient, tolerating heat, sun, and variable conditions, while remaining easy and low maintenance. Its carefree nature makes it ideal for today's gardeners seeking impact with minimal effort, it also offers useful early-season value for pollinators, with spring flowers that can attract bees and other insects. Combining novelty, performance and sustainability	
Special Qualities which Benefit the Consumer	Cercis Blue Lagoon represents a true breakthrough as the first Cercis with grey-blue foliage, a colour never seen in this genus. Traditionally known for green, yellow, orange or purple leaves, Cercis now enters an entirely new colour category, offering a cool, luminous tone that contrasts beautifully with its pink spring flowers and other garden plants. This unique foliage effect is stable, highly ornamental, and season-long, transforming the plant from a spring-flowering feature into a full-season foliage statement. It redefines the visual role of Cercis in modern garden design	
Additional remarks	Cercis Blue Lagoon is easy to grow and well-suited to a wide range of gardens. Plant in a full sun to semi sun position in well-drained soil for best colour and performance. The distinctive grey-blue foliage holds well through the season, with good tolerance to both heat and moderate cold once established. Water regularly during establishment, then only during prolonged dry periods. Minimal pruning is required. Ideal as a specimen compact tree, well branched shrub or in mixed borders, it brings long-lasting structure and colour with very little effort.

Category	Trees	
Plant Name	Malus Julia	
Entrant	Frank P Matthews Ltd	
Breeder	Hugh Ermen	
Description	<p>This new introduction combines the very best garden features of a classic crab apple with several additional and special characteristics. Scented pink opening white apple blossom flowers are followed by persistent bright red fruit with very attractive extended pink/red stalks. The heavy fruit load is something to behold in autumn. The tree is of medium vigour, suitable for all locations and has good resistance to scab. The fruit will attract a multitude of birds in the cold weather and are also useful for culinary use and for making excellent jelly. Profuse blossom in the spring, fantastic for pollinators. Malus 'Julia' has been named after Julia Trevelyan Oman CBE (Lady Strong) who with her husband Sir Roy Strong created The Laskett Garden in Herefordshire, one of the largest post war formal gardens. Julia was a great friend of Frank P Matthews not least for her mutual love of crab apples of which she had an extensive collection. She died in October 2003 after a short illness with pancreatic cancer. Each tree sold will contribute to Cancer Research.</p>	
Special Qualities which Benefit the Consumer	<p>Malus Julia is an impressive crab apple and was selected for its profuse production of cherry like berries with red stalks and impressive fragrant flowers in spring the tree. Autumn crab apples are attractive, scarlet and persistent, hanging on well into the spring, can be used for jelly, jams or left on the tree as a natural bird feeder. The tree is neat and upright when young, compact and more rounded with age. Healthy with consistently heavy crops year on year. Self-fertile, and very useful as pollinators for a variety of fruit trees and insects. Suitable for all soil types, full sun or part shade.</p>	
Additional remarks	<p>Can be planted in a wide range of soils and sites. No notable pest or diseases. Malus are one of the most resilient trees for climate change and extremes once established.</p>

Category	Trees	
Plant Name	Prunus Winter's Kiss™	
Entrant	Frank P Matthews Ltd	
Breeder	Kenneth Tobutt and Dr Radovan Boskovic	
Description	<p>Prunus Winter's Kiss® is a great innovation in plant breeding, the bright magenta/fuschia pink winter flowering ornamental cherry. This variety has dainty bright pink flowers with attractive long stamens that extend beyond the petals. throughout the winter, flowering on and off from November through to March and quite often for Christmas. The flowers look like little lips or kisses which adorn the tree to give a bright vision in the middle of winter. The flowers are very robust, sustaining no damage during frost. A remarkable P. x subhirtella plant breeding breakthrough for flower colour. A naturally small tree, Winter's Kiss is ideal and great value for small spaces and for such a long flowering period. A good garden performer and it is assured on all soil types and regions of the UK. The tree is a healthy grower, robust with glossy foliage, a graceful, habit and propagates well. Can be also grown in a container and is a fantastic addition for pollinators during the winter when there is limited availability of pollen. The advanced breeding of this fine cherry has brought together the prolific flowering and hardiness of Prunus x subhirtella Autumnalis with the added rich pink colours of Prunus campanulata.</p>	
Special Qualities which Benefit the Consumer	<p>Prunus Winter's Kiss® is a great innovation in plant breeding, the first deep pink, winter flowering ornamental cherry. Frost resistant flowers offer a stunning floral display around Christmas time and in the depths of winter. Can flower for around 2 months and longer. The tree is robust and has a graceful and can be planted in small gardens and even patio pots. A good garden performer will grow in all regions of the UK and on all soil types.</p>	
Additional remarks	<p>There are no known issues with pests and in particular observations show no susceptibility to black fly aphid. There is resistance to bacterial blossom and foliage infections along with frost resistance. This tree has been carefully selected from a dedicated Prunus breeding programme in the UK.</p>

Category	Trees	
Plant Name	Betula pendula Fuzzy feathers	
Entrant	Newey	
Breeder	Sander van Viet	
Description	Betula pendula Fuzzy Feathers is an elegant and distinctive dwarf cultivar of the native Silver birch , valued for its finely divided purple feather like foliage and graceful form .Unlike the typical Betula pendula this variety features delicately cut leaves that create a soft almost fern like texture , giving the tree a light and airy delicate feel	
Special Qualities which Benefit the Consumer	Ideal for small gardens and small spaces including patio pots , a delicate native species , both hardy and beautiful.	
Additional remarks	Tolerant of most garden types due to it being a seedling of Betula pendula , fantastic tree for pots and small gardens offering a light delicate feel .

Category	Trees	
Plant Name	Sequoia sempervirens 'Mount Loma Prieta Spike'	
Entrant	Profitplant	
Breeder	Boomkamp	
Description	Sequoia sempervirens 'Mount Loma Prieta Spike' is a cultivar of the coast redwood distinguished by its cascading branches and strong central leader. Like all redwoods, it is a fast-growing tree, reaching an eventual height of approximately 6–8 metres within 5–10 years. The plant is evergreen and hardy to H6 (-15°C to -20°C; suitable for the UK and Northern Europe). Young plants may be slightly more sensitive until fully established. In spring, 'Mount Loma Prieta Spike' produces creamy white young shoots and needles, which gradually mature to green. Older specimens develop an attractive reddish-brown bark, which is fibrous and peeling in texture.	
Special Qualities which Benefit the Consumer	Position: prefers moist but well-drained soil with a neutral pH. Suitable for full sun or partial shade. Fast-growing and suitable for medium-sized and large gardens. Pruning is not necessary, although Sequoias tolerate pruning well.	
Additional remarks	Low susceptibility to diseases. Fast-growing. Evergreen.

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Acer palmatum Golden Trompenburg	
Entrant	Javado UK	
Breeder	The plant requires little maintenance. If necessary, prune back any overly long branches in the spring. The location is important, however. Due to the yellow leaves, do not place the plant in full sun, but give it a spot in the garden with partial shade or shade.	
Description	Acer palmatum offers a rare combination of spectacular foliage colours, elegant structures, usability in small gardens relatively easy maintenance, and strong aesthetic impact in garden design	
Special Qualities which Benefit the Consumer	The plant requires little maintenance. If necessary, prune back any overly long branches in the spring. The location is important, however. Due to the yellow leaves, do not place the plant in full sun, but give it a spot in the garden with partial shade or shade.	
Additional remarks	Little maintenance, needs well drained -slightly acidic soil. Can be grown in pot or ground.

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Buddleja davidii Butterfly Candy® Little Blackberry ('BotEx 016'PBR)	
Entrant	Javado UK	
Breeder	Botanic Experience BV	
Description	Buddleja Butterfly Candy® is a very floriferous series. The flowers have a light, sweet fragrance and they are very attractive to butterflies and bees. This makes the ButterflyCandy® series great for biodiversity. All the varieties are well-branched and because of their size ideal for containers and smaller gardens.	
Special Qualities which Benefit the Consumer	Place Butterfly Candy® in full sun in a well-drained, fertile soil. Hardy to -18 °C. Buddleja Butterfly Candy® Little Blackberry has a very compact plant size of 90 cm high and 80 cm wide and a naturally rounded habit. Little Blackberry has flower plumes in a striking dark purple colour.	
Additional remarks	Very floriferous, neat, rounded and compact growth habit (great for small gardens), attracts butterflies and bees

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Chamaecyparis thyoides EL PASO™	
Entrant	Javado UK	
Breeder	Henrik Rieberg	
Description	El Paso is absolutely the coolest conifer out there. With its eccentric branches and unique growth habit, the plant resembles a cactus or euphorbia. El Paso is a new evergreen, easy-to-grow trendy conifer that can be widely used both as a garden plant and as a houseplant.	
Special Qualities which Benefit the Consumer	EL PASO™ speaks for itself. It is a unique and trendy form unlike anything seen before, not immediately recognizable as a conifer, yet it possesses all the characteristic qualities such as being evergreen, hardy down to -20°C, fast-growing, and exceptionally healthy.	
Additional remarks	The plant tolerates moist conditions well and is hardly, if at all, affected by diseases and pests.	

Vote for Your Favourite New Plant

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Cedrus deodara 'Green Cascade'	
Entrant	Profitplant UK	
Breeder	Paul Bremmer	
Description	Cedrus deodara has potential as a niche product for the winter season as an alternative Christmas tree. The drooping branches are very suitable for hanging decorations. The green colour is unique for a deodara. Because the plant can be propagated from cuttings, it can be grown at a reasonable cost, although the need for staking means it is not an inexpensive product due to labour requirements. However, as a niche product, it is a valuable addition.	
Special Qualities which Benefit the Consumer	The plant is very suitable as a terrace plant during winter. Decorated with string lights, this Cedrus creates atmosphere around the home during the darkest period of the year.	
Additional remarks	The plant may lose some needles in early spring. However, it will later produce attractive fresh new foliage.

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Rosa Art Deco (KORtagtra)	
Entrant	Whartons Garden Roses	
Breeder	Kordes Rosen	
Description	<p>A Floribunda rose with a bushy, upright habit and exceptionally glossy, dark green foliage. Semi-double, gently cupped blooms measure approximately 7cm across and are produced in abundant clusters of five to seven flowers, throughout the summer and into autumn. Each bloom opens soft white, delicately edged in raspberry pink, with colouring that deepens in response to UV light to create a distinctive, ever-changing ombré effect. The open flower form is especially welcoming to pollinators, providing ornamental appeal whilst supporting biodiversity. Outstanding natural health and resilience make this a good sustainable choice as Art Deco requires minimal care whilst delivering exceptional garden performance and repeat flowering year after year. Idea for bed, borders and large patio pots.</p>	
Special Qualities which Benefit the Consumer	<p>Repeat flowers summer through to autumn each year, unusual ever-changing flowers, attractive to pollinators, super healthy. Ideal for pots.</p>	
Additional remarks	<p>Ideal for bed, borders and large patio pots.</p>

Category	Shrubs (including Conifers) & Climbers		
Plant Name	Rosa Cerise Sunblaze® (Meiheliot)		
Entrant	Whartons Garden Roses		
Breeder	Meilland International		
Description	A repeat-flowering patio rose that brings colour from late spring through to early autumn, returning year after year. Abundant vibrant cerise-pink blooms, each reaching up to 5cm across, create a striking display and are ideal for brightening balconies, patios and smaller outdoor spaces. Perfect for growing in containers, this compact rose combines impressive flower power with excellent disease resistance, offering a more sustainable, longer-lasting alternative to seasonal bedding plants.		
Special Qualities which Benefit the Consumer	Long flowering period from late spring through to early autumn.		
Additional remarks	Excellent health

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Rosa hybrid 'Perfume'	
Entrant	Allensmore Nurseries LTD	
Breeder	Pheno Geno Roses	
Description	Rosa Perfume is a straight stemmed compact bush rose, best grown in full sun and moist well-draining soil. Suitable for borders and containers, and is frost hardy. Due to how this double flower opens, stamen and nectaries are accessible to pollinators unlike other double flowered roses.	
Special Qualities which Benefit the Consumer	As this is a compact bush rose reaching 80-100cm tall, it would be perfect for planting in containers and grown on small patios or balconies, but is also suited for border planting. Soft pink, fragranced double flowers bloom from early Summer to late Autumn, with peak flowering in July/August. Flowers are suitable for cut floral arrangements without excessive shattering. Regular feeding throughout the year is needed to encourage regular flowering, specifically in Spring and mid-Summer and annual pruning in Spring will be necessary to shape the plant.	
Additional remarks	Drought tolerant once established after several years growth. Disease resistant (blackspot & downy mildews)

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Clematis Eliza™ EviGsy158(PBR)	
Entrant	The Guernsey Clematis Nursery Ltd, Raymond Evison Clematis	
Breeder	Raymond J Evison Ltd	
Description	<p>Why Eliza? The name 'Eliza' is inspired by The Book of Ebenezer Le Page, the celebrated novel by Guernsey-born author G. B. Edwards. The book is written as the fictional autobiography of Ebenezer Le Page, a tomato grower and fisherman who spends his entire life in The Vale, the same parish where the Guernsey Clematis Nursery is based. In the story, Liza Queripel is the great love of Ebenezer's life. To honour this connection to local culture and landscape, the name 'Eliza' brings together elements of both names, capturing the spirit of Guernsey's heritage in this new clematis. This large-flowered clematis opens as a pale violet/blue, soon maturing to pure white with contrasting deep red tipped anthers. The blooms are ruffled or wavy, being produced from late spring through to early summer then repeat flowers from late summer onwards. A generous volume of blooms cover the plant from base to tip making for a very impressive display. With its compact habit and height of 90-120cm, Eliza would make a wonderful addition to a patio, in a container, or in the mid to front of a flower border on an obelisk or growing through host plants, where its longevity of successive flowers can be fully appreciated. In late winter/early Spring simply reduce all stems down to 6" (15cm) of soil level.</p>	
Special Qualities which Benefit the Consumer	<p>Easy to grow and prune. Will grow happily in a border or a container in suitable for any sized garden. Long flowering period and volume of blooms.</p>	
Additional remarks	<p>A clematis for any garden, terrace, balcony, border or container. Very good in shade where it will brighten up darker spaces.</p>

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Clematis Ithemba™ EviGsy157(PBR)	
Entrant	The Guernsey Clematis Nursery Ltd, Raymond Evison Clematis	
Breeder	Raymond J Evison Ltd	
Description	Ithemba means Hope in Zulu, Named to raise awareness for the Red Cross Children's Hospital in Cape Town SA. A high impact plant with bright white blooms, a delicate pink bar, with a ruffled edge to the sepals. The complementary red filaments and anthers appear to increase the brightness of the white sepals. Blooms are 8-10cm (3½" - 4") and cover the plant from late spring to early summer and again in Late summer. Flowers profusely down the stems giving excellent flower coverage over the full height of the plant and longevity of flowering. A very full, bushy plant, height 90-120cm. Simple pruning technique, cut back to 15cm (6") in late winter/spring, will produce a captivating display, year, after year. Grow in a container or front to mid border on a framework or grow through other plants.	
Special Qualities which Benefit the Consumer	Huge amount of initial blooms followed by reliable repeat flowering from new growth and down the stem. Reliable autumn flowering. Will happily grow best in any position out of midday direct sunlight, in all soils other than heavy clay, where container growing is suggested, which it will perform very well in. No fuss pruning as noted in description.	
Additional remarks	A clematis for any garden, terrace, balcony, border or container. Very good in shade where it will brighten up darker spaces.

Entrant	The Guernsey Clematis Nursery Ltd, Raymond Evison Clematis	
Breeder	Raymond J Evison Ltd	
Description	<p>A full flower with each sepal having a broad central band of deep rosy pink with paler edges and prominent primrose anthers. These are produced in late spring and early summer, with repeat blooms in late summer early autumn. A full plant with flowers from base to tip. The modern clematis in the Raymond Evison collection flower readily and will yield good results using relatively simple pruning techniques. In late winter/early Spring simply reduce all stems down to 6" (15cm) of soil level. The flowers from the older wood are deeper almost solid in colour, whereas the blooms from new growth show a distinctive bar with lighter edged tepals. Named to help raise funds for the National Garden Scheme that Raymond and the Queen's Nurses have set up in the Channel Islands with all raised funds going to The Queen's Institute of Community Nursing.to</p>	
Special Qualities which Benefit the Consumer	<p>Huge amount of initial blooms followed by reliable repeat flowering from new growth and down the stem. Reliable autumn flowering. Will happily grow in full sun and partial shade in all soils other than heavy clay, where container growing is suggested, which it will perform very well in. Category	Shrubs (including Conifers) & Climbers
Plant Name	Fargesia angustissima Silkleaf
Entrant	Javado UK
Breeder	Plant Select
Description	<p>Fargesia One Boo™ Silkleaf is a highly elegant, non-invasive clumping bamboo distinguished by its exceptionally fine, narrow, foliage and graceful, arching habit. The plant is evergreen and develops fresh leaves in early spring. The plant forms dense, slightly fountain-shaped clumps, creating a refined and soft-textured appearance that brings movement and structure to gardens and landscapes. The foliage consists of long, slender, glossy green leaves that are significantly narrower than typical Fargesia varieties, giving the plant a delicate, almost “silk-like” look. Culms are slim, upright and well-branched, contributing to a full yet airy silhouette. This plant provides shelter and nesting opportunities for birds and small wildlife. Hollow old stalks are ideal nesting places for bees and insects. This variety is very winter hardy, approx. -18°C to -22°C. Well-suited for Northern, Western and continental European climates. Retains foliage well in winter, although extreme cold, wind and extreme sun cause minor leaf rolling. Fargesia One Boo™ Silkleaf performs very well in partial to full shade. On moist soils or once established, this variety is doing well in full sun. This variety tolerates drought and heat. The compact, non-running root system makes it ideal for pots and planters. This Fargesia is easy to prune and branches when cut. This makes it perfect for urban gardens and patio screening. Stays compact in pot/planter. Regular watering and occasional feeding is required.</p>
Special Qualities which Benefit the Consumer	<p>Easy to care, easy to prune, tolerant of various conditions, suitable for container growing, evergreen. The only thing to consider is the drainage of soil/pot. This plant does not like wet feet. When planted in the garden, keep the soil moist the first year after planting.</p>
Additional remarks	<p>the plant is very pest/disease resistant. The plant gives texture in the garden. Combine with dark/bold foliage shrubs, architectural plants and flowering plants. Tolerates dry periods, but avoid very dry spots.</p>

Plant Name	Hibiscus syriacus 'Samilhong' / 'Woojeon'	
Entrant	Diderk Heinje Baumschule	
Breeder	Kyung-Ku Shim + Ki Byung Lim + Yoo Mi Ha	
Description	<p>Hibiscus syriacus Little Legends Pink and White were discovered by hibiscus expert Mr. Shim and loved all over the world for their extremely compact growth. They may be the smallest Hibiscus syriacus on the market at this moment! Little Legends White has an elegant, sophisticated habit and each stem is full of white flower buds. The white flowers appear throughout the summer and attract bees and butterflies throughout the summer. Due to its extremely compact growth, Little Legends White takes up less space than other hibiscus varieties and shows all the advantages of hibiscus, but in a beautiful, compact form. The Little Legends are heat and drought tolerant, which makes them as strong as they are beautiful.</p>	
Special Qualities which Benefit the Consumer	<p>Extreme dwarf shape and therefore ideal for small gardens; long flowering period with an abundant flower. Great for growing in containers.</p>	
Additional remarks	<p>Low maintenance.</p>

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Hydrangea serrata Bloombuster	
Entrant	Diderk Heinje Baumschule	
Breeder	Heinje	
Description	Uncomplicated Hydrangea – no worries about pruning and extremely robust: The Hydrangea 'Bloombuster' inspires with its abundant flowering and compact growth, but above all with its exceptional pruning tolerance. In contrast to conventional hydrangeas, it can be cut back at any time – even with a hedge trimmer – and still reliably produces new flowers every year. Summer pruning can even promote a second flowering. 'Bloombuster' blooms from July to September in intense blue or pink and offers insects valuable food. 'Bloombuster' is available from Heinje in a 5-litre pot.	
Special Qualities which Benefit the Consumer	Compact growth, very pruning tolerant, flowers on new wood. Good for growing in containers.	
Additional remarks	Suitable for containers and bed planting.

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Lavandula x intermedia 'Tuscan Night'	
Entrant	Darby Nursery Stock	
Breeder	Dr Simon Charlesworth	
Description	A superbly fragrant new intermedia Lavender with a more compact habit, aromatic grey-green foliage and gorgeous dark blue flowers in summer every year. Ideal for garden borders, patio pots or placed around pathways so you can enjoy the fragrance as you brush past. Attracts bees and butterflies into the garden. Hardy, evergreen and easy to grow.	
Special Qualities which Benefit the Consumer	Highly attractive to bumble bees. Their long feeding tubes are perfect to reach into the tubular flowers to collect the pollen. Similarly butterflies. Also valuable to honey bees. Plant is very hardy to -15c. Best in full sun, will tolerate partial shade for a few hours a day. Prefers dry, well drained soil. Dislikes wet soil particularly in winter. Wind tolerant.	
Additional remarks	Best in the garden as a hedge or statement plant. Would also suit large pots.

Category	Shrubs (including Conifers) & Climbers		
Plant Name	Hydrangea scandens 'First Love' - 22630 PBR		
Entrant	Newey		
Breeder	Marie France - Doll		
Description	This enchanting early-flowering Hydrangea reveals its first blooms from April and continues to boast its vivid pink delights right through to June. But First Love Pink doesn't just flower early — she flowers with abundance. Each plant is generously covered in striking, bright pink flowers that bring life and charm to any garden or landscape.		
Special Qualities which Benefit the Consumer	Early flowering Very rich flowering Romantic striking pink flower colour Colour can change to blue in acid soil Very natural look		
Additional remarks	When grown in acid soil, these vibrant pink blossoms can undergo a remarkable transformation and turn a captivating shade of blue, adding an extra layer of wonder. With her bushy growth habit and natural appearance, Hydrangea First Love Pink makes an ideal choice for gardeners who appreciate both elegance and a touch of surprise. Hydrangea First Love Pink grows up to 150 cm high and wide, and prefers a spot in partial shade to full sun, in moist, well-drained soil. First Love Pink is hardy to -10 °C.

Plant Name	Osmanthus heterophyllus Perfume Party ('PNOS01'PBR)	
Entrant	Javado UK	
Breeder	After 5 years, Osmanthus Perfume Party grows up to 50 cm high and wide and maintains its dwarf, rounded, dense habit. Plant it in full sun or partial shade in well-drained soil. It is hardy to -15 °C.	
Description	Discover Osmanthus Perfume Party, a beautifully compact, rounded dwarf shrub that brings year-round colour and seasonal fragrance to the garden. With its dense, well-branched structure and small, glossy, dark green leaves, this evergreen variety boasts stunning copper-orange new growth each spring. Enjoy the delightful, sweet-scented blooms that attract pollinators, adding vibrant life to any landscape design.	
Special Qualities which Benefit the Consumer	Perfume Party is a dense plant that is as resilient as beautiful. It's winter-hardy, highly resistant to disease, and effortlessly tolerates heat, drought, and humidity. This easy-to-grow Osmanthus offers year-round colour and charm with minimal maintenance. This evergreen is ideal as a low hedge for small or large gardens, landscape borders, or pots and planters on terrace, balcony, or patio.	
Additional remarks	After 5 years, Osmanthus Perfume Party grows up to 50 cm high and wide and maintains its dwarf, rounded, dense habit. Plant it in full sun or partial shade in well-drained soil. It is hardy to -15 °C.

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Rosa floribunda Knoppi	
Entrant	Diderk Heinje Baumschule	
Breeder	Kordes	
Description	<p>Rosa 'Knoppi' deliberately reinterprets the classic image of modern rose breeding. Instead of lushly opened flowers, it presents numerous, perfectly shaped buds over a period of weeks, which hardly open and are reminiscent of small "buttons" - and this is exactly where its special aesthetic effect arises. The unusual variety combines long-lasting effect with a clear, modern look and thus opens up completely new areas of application in sales. The button-like flowers of the so-called "bud-flowering rose" are the defining feature of the variety. Due to their closed appearance, they do not fade, which leads to a significantly longer decorative benefit in the trade as well as for the end customer. From June to around August, 'Knoppi' shows an even bud set, which is maintained throughout the entire season - an advantage that is particularly noticeable in the summer business compared to classic flower roses. The variety is also extremely versatile in use: thanks to its compact, structured growth, it is ideal for use in containers on and for beds, but it can also be used excellently for floristic work. Especially in arrangements, wreaths and bouquets, the stable bud structure provides a modern, clear look that has hardly been found in this form so far. Rose lovers can choose between the three colours pink, red and white. Baumschule Heinje offers the variety in pot size C 4.6, as a high-quality, well-branched shrub that presents itself excellently both in individual sales and in combination with other summer plants. In terms of colour, 'Knoppi' forms an attractive trio: red, pink and white cover different customer requirements and allow a wide range of placements at the POS. With its combination of robust garden performance, hardy vitality and a completely new flower concept, 'Knoppi' offers retailers an exciting opportunity to creatively expand their range of roses – because 'Knoppi' is a rose, but "with a difference".</p>	
Special Qualities which Benefit the Consumer	<p>Repeat flowering from June to September. Great for growing in containers and wells as the garden. Long lasting flowers. Unique flowers which are great as cut flowers and arrangements.</p>	
Additional remarks	<p>Good disease resistance.</p>

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Hydrangea paniculata Groundbreaker® Ruby ('LC NO27'PBR)	
Entrant	Branded Garden Products	
Breeder	Alex Schoemaker	
Description	Groundbreaker® Ruby is the first true groundcover form of Hydrangea paniculata with ruby-red flowers in late summer, redefining how this traditionally upright shrub can be used in the garden. Its naturally low, spreading habit creates a dense, low-growing habit, unlike any existing paniculata. Combined with vivid ruby-red flowers, it delivers both structural and seasonal interest in a completely new format. This breakthrough transforms a classic garden plant into a versatile, space-efficient solution, offering designers and gardeners a novel way to use Hydrangea in modern landscapes.	
Special Qualities which Benefit the Consumer	Groundbreaker® Ruby is easy to grow and highly adaptable. Plant in sun to partial shade in well-drained soil for best flowering and colour intensity. Its naturally low, spreading habit requires little to no pruning, simply tidy lightly in early spring if needed. Compared to traditional upright Hydrangea paniculata, this variety reduces maintenance by eliminating the need for shaping or staking. It is both heat and cold tolerant once established and performs reliably in a wide range of garden conditions. Water regularly during establishment, then only in prolonged dry periods. Ideal for borders, mass planting, or groundcover use, it suppresses weeds and creates a continuous carpet of colour, bringing long-lasting impact with minimal effort.	
Additional remarks	Its versatile, spreading habit thrives in borders, edges, compact gardens, hanging baskets, window boxes, as a specimen, or in mass plantings. Groundbreaker® Ruby is easy to grow and highly adaptable. Plant in sun to partial shade in well-drained soil for best flowering and colour intensity. Its naturally low, spreading habit requires little to no pruning, simply tidy lightly in early spring if needed

Category	Shrubs (including Conifers) & Climbers	
Plant Name	Clematis Mochi ('Minamo-no-Yousei')	
Entrant	Branded Garden Products	
Breeder	Tetsuya Hirota	
Description	Clematis Mochi offers real novelty, with brushed, spray-like blooms that change in form over an exceptional 120-plus day flowering season. Early single flowers are more accessible to visiting insects, adding extra garden value before later blooms develop into its distinctive double forms. Its compact, versatile habit suits containers, small gardens and vertical planting, while its easy, low-maintenance nature fits modern lifestyles. Combining long performance, changing flower character and practical garden use, it brings something genuinely fresh to the market	
Special Qualities which Benefit the Consumer	Exceptional long flowering period of 120 days! Extraordinary 'spray painted' blooms like no other clematis. Remarkable progression from single, semi-double to fully double blooms on each single plant	
Additional remarks	Clematis Mochi is easy to grow and ideal for a wide range of garden settings, including containers and small spaces. Plant in sun to partial shade, with roots kept cool and moist in well-drained soil. Provide support such as a trellis or obelisk. Water regularly during establishment and in dry periods. It's easy pruning in early spring encourages fresh growth and supports its long flowering season of over 120 days. Compared to traditional Clematis, its compact habit makes it easier to manage and perfect for patios and urban gardens. The continuously changing flowers provide extended interest without additional maintenance. With good resilience and reliable repeat flowering, it offers a long-lasting, low-effort display for gardeners seeking something truly distinctive.

Visit the central Voting Station in the linkway, and choose your favourite from the 7 winning plants. The Visitor Vote is announced on Thursday morning at 9.15am

Category	Herbaceous Perennials	
Plant Name	Verbascum creticum 'WALVERBEE'	
Entrant	Farplants Sales Ltd	
Breeder	Walberton Plants Limited	
Description	Verbascum Walberton's® Beeline™ is a stunning new variety that produces showy, branched stems of large, rich yellow flowers, each with a distinct dark burgundy-red center. It produces these scented, bee-friendly flowers from late spring and throughout the summer. Even before the flowers arrive, the plant boasts bold, glossy, dark green leaves. It is a plant for a sunny position and will grow happily in most soils in a container or in borders, especially where it has good drainage - it has excellent resistance to drought.	
Special Qualities which Benefit the Consumer	Benefits to consumer: • Lots of large, rich yellow flowers. Scented too! • Neat, upright, well-branched plants • Long season of flower – longer than existing varieties • Dark green glossy leaves • Attractive to bees • Drought resistant • Easy to grow	
Additional remarks	Its neat, upright, and well-branched habit makes it a perfect choice for the middle of a border or as a focal point in a patio container. Unlike taller varieties, its compact height means it fits beautifully in smaller gardens and rarely requires staking. This is a hardy and easy-to-grow plant that thrives in a sunny position. It is highly adaptable and will grow happily in most soil types, including poor or stony ground. It is particularly noted for its excellent drought resistance and ability to handle dry spells with ease. While it stands up well to the weather, it performs best in well-drained spots to avoid waterlogged soil. Additionally, its sterile nature means it won't self-seed aggressively, making it a low-maintenance and well-behaved addition to any garden.

Plant Name	Rudbeckia hirta Golden Zen Yuna	
Entrant	Selecta-One UK Ltd	
Breeder	Selecta one	
Description	<p>Rudbeckia Golden Zen Yuna is a stunning variety with rich, double yellow-orange flowers that instantly brighten any garden or patio. Flowering continuously from summer through to late autumn, this eye-catching plant provides months of vibrant colour and creates a warm, cheerful atmosphere outdoors.</p>	
Special Qualities which Benefit the Consumer	<p>Perfect for borders, patios, and containers, Golden Zen Yuna combines beauty with versatility. It thrives in a sunny position with well-drained soil and is easy to care for, making it an excellent choice for both experienced and beginner gardeners. Although it requires little maintenance, nutrient-rich soil will encourage even healthier growth and abundant blooms. After the last frost, simply cut back the plant to protect the roots and encourage fresh new growth in spring. With minimal effort, your Rudbeckia Golden Zen Yuna will reward you with a long-lasting display of healthy, vibrant flowers year after year.</p>	
Additional remarks	<p>It is not only an asset to your garden, but it is also great for containers. Golden Zen Yuna thrives in a sunny location with well-drained soil. It doesn't require fertiliser, but ensure the soil is rich enough for healthy growth.</p>

Category	Herbaceous Perennials	
Plant Name	Nepeta x faassenii 'G20010' "EarliBlue"	
Entrant	Farplants Sales Ltd	
Breeder	GardenGenetics LLC	
Description	<p>Nepeta x faassenii EarliBlue is an excellent new compact and early-flowering variety of catmint. In trials, it has outperformed other varieties by flowering significantly earlier, blooming continuously throughout spring and summer, and maintaining an attractive plant shape without the unsightly yellowing of foliage that can be a problem in other varieties. For the consumer, EarliBlue is an easy-to-grow compact plant that is drought tolerant and resistant to splitting during summer storms. From late spring onwards, it produces masses of upright stems covered in lavender-purple flowers which are a real magnet for bees. The foliage is a soft grey-green and releases a lovely fragrance when handled. EarliBlue can be grown successfully in containers or in the border. For growers, EarliBlue has a reduced requirement for vernalisation, so production schedules can be shortened. It is compact and free flowering, so it is easy to produce impulse-ready plants that can be densely packed for transport.</p>	
Special Qualities which Benefit the Consumer	<p>Compact Habit: Its naturally neat and controlled growth makes it an ideal choice for smaller modern gardens or for high-impact container displays on patios. Extended Season of Interest: 'EarliBlue' begins flowering significantly earlier than other cultivars and maintains a prolific display of lavender-purple blooms throughout the spring and summer. Pollinator Friendly: The abundant flowers act as a powerful magnet for bees and other beneficial garden insects. Sensory Appeal: The soft, grey-green foliage provides a beautiful backdrop to the flowers and releases a pleasant aroma when brushed against or handled. Low Maintenance: Highly resilient and easy to grow in most well-drained soils; it thrives in a sunny position and is notably drought-tolerant once established. Improved Sturdiness: Unlike traditional catmint, the stems are strong enough to withstand summer storms without "flopping" or breaking open, ensuring the plant looks good all season.</p>	
Additional remarks	<p>'EarliBlue' is a robust and resilient performer in the garden. It boasts excellent resistance to the unsightly midsummer foliage yellowing that often plagues other catmint varieties. This durability extends to its weather tolerance; once established, the plant is highly drought-tolerant and thrives in full sun. Crucially for the unpredictable UK climate, its sturdy, compact habit ensures it remains upright and attractive even after heavy rain or summer storms, avoiding the tendency to "flop" or split like taller cultivars. In terms of garden design, 'EarliBlue' is incredibly versatile. Its neat proportions make it a perfect choice for edging paths or softened border fronts where its fragrance can be easily enjoyed. It is equally at home in containers, adding texture to patio pots and mixed window boxes. For those focused on ecological gardening, it is an essential addition to bee-friendly and wildlife-focused schemes. Furthermore, its ability to flourish with minimal irrigation makes it highly suited to gravel gardens and Mediterranean-style landscaping.</p>

Category	Herbaceous Perennials	
Plant Name	Geum hybrid 'Battenberg Cake'®	
Entrant	Allensmore Nurseries LTD	
Breeder	Gerrit Lommerse	
Description	This is a compact, clump forming Geum which grows best in full sun or semi-shady locations in moist but well drained soils. Performs well in borders and containers, and will tolerate hard frosts. Geum pollen and nectar is a rich, early food source for various pollinators such as bees, flies and butterflies.	
Special Qualities which Benefit the Consumer	Geum Battenberg Cake flowers from April through to August with repeated blooms being encouraged by regularly dead-heading old flowers. This Grand Dessert series will reach a height of 30cm and a spread of 40-50cm, making them ideal for planting in both borders and containers. Would look great in a cottage or informal themed garden. Flowers can be used in fresh cut displays, seedheads used in dried displays, and petals can be dried to create confetti.	
Additional remarks	This is an extremely low maintenance plant which requires no formative pruning, and little deadheading throughout the flowering period. Good for those tricky to plant semi shady/semi sunny areas. Is extremely frost hardy, and will survive most British winters.

Category	Herbaceous Perennials	
Plant Name	Digitalis purpurea 'Rhubarb and Custard'	
Entrant	Allensmore Nurseries LTD	
Breeder	Syngenta	
Description	This is a moderately sized Digitalis that is best grown in full sun or partial shade, well suited for borders and containers so long as soil is moist yet well-draining. Can tolerate frost but may need to be protected from waterlogging over winter. This plant is a pollinator magnet, specifically long-tongued bumblebees and butterflies.	
Special Qualities which Benefit the Consumer	Digitalis Rhubarb & Custard reaches a 1 m tall and a spread of 50cm making it perfect in borders for creating depth and vertical height, but would look equally as stunning in a decorative container. Excellent for cottage style planting. Flowers are present throughout summer and into early Autumn, and repeated flowering can be encouraged by pruning spent flower spikes Flower spikes can be cut for fresh displays however as with any other Digitalis, all parts of the plant are toxic when eaten and gloves need to be worn when handling.	
Additional remarks	A low maintenance plant with zero formative pruning, and minimal deadheading/pruning flower spikes throughout the growing season. A good vertical space filler, and perfect for tricky areas to plant ie along shaded fences/walls. At 1m tall, Digitalis Rhubarb & Custard will withstand most British weather extremes without staking or tying, however if planted a windy location then staking is recommended.

Category	Herbaceous Perennials	
Plant Name	Astrantia major 'Sparkling Stars Diamond'	
Entrant	Allensmore Nurseries LTD	
Breeder	Gill Richardson	
Description	A clump forming herbaceous perennial suitable for containers and borders. Best grown in full sun or semi shady spots in moisture retentive soil, and will tolerate hard frosts. This will be an incredibly attractive plant for pollinators particularly for bees, beetles and hoverflies.	
Special Qualities which Benefit the Consumer	This Astrantia's star feature is the variegated foliage, which is visible from March to October, and flowers show from May through to August. This variety will reach a spread of 50cm and a height of 50-70cm, making it perfect for borders and containers in a range of garden planting styles (cottage, urban etc) without getting unruly. Flowers can be cut to be used for fresh or dried floral displays.	
Additional remarks	Very low maintenance due to zero formative pruning necessary and basic deadheading throughout the flowering period. Perfect for difficult planting areas for example under trees, damp semi sunny areas etc Due to its smaller size than other Astrantia major, this variety will hold up to heavy British downpours. Slug and snail resistant.

Description	The best of Sempervivum Chick Charms in giant sizes! The Chick Charms are one of the most loved collectable sempervivum worldwide and they are 100% bullet-proof. Drought tolerant, hardy, water-saving, robust, low-maintenance and climate-proof. And the best thing is yet to come: you can use this giant-sized evergreen sempervivum for any landscaping project. A rock garden, a living wall, pots and planters or green roofs: these superstars will create an impressive focal point wherever they're planted.	
Special Qualities which Benefit the Consumer	Drought resistant, easy care	
Additional remarks	Maroon Mountain is drought tolerant, water-saving, low-maintenance, and hardly needs any looking after. The Chick Charms® Giants are selectively bred to finish beautifully in a 4l pot. They prefer a spot in full sun and a well-drained soil and are hardy up to -25 °C.

Category	Herbaceous Perennials	
Plant Name	Antirrhinum 'Shiryu Kiss'	
Entrant	Kernock Park Plants	
Breeder	Peter Moore	
Description	<p>'Shiryu Kiss' flowers with remarkable generosity, producing a long succession of rich purple blooms that are both nectar laden and irresistible to larger bumblebees and butterflies. Unlike most members of its genus, this cultivar has proved fully hardy and reliably perennial, offering excellent long term value in the garden. Its flowers are set off beautifully by deep green foliage washed with dark tones and noted for its strong disease resistance. It responds well to pruning during the growing season, quickly pushing out fresh, heavily budded growth that soon bursts back into colour. Although it thrives best in full sun, it will tolerate a degree of shade and, over time, develops into a sturdy, resilient specimen. The name 'Shiryu' - meaning "purple dragon" in Japanese, pays homage both to the snapdragon heritage of the plant and to the subtle purple hues found in its flowers and foliage.</p>	
Special Qualities which Benefit the Consumer	<p>The extended flowering period of 'Shiryu Kiss', and the perennial nature of the plant, make it a cost-effective selection for gardeners and a boost for nature – bringing the bees and butterflies that gardeners adore into the garden earlier than annual snapdragons and providing critical sustenance to these essential pollinators over a longer period of time. The healthy foliage and disease-resistance make it a robust selection and reduces the need for pesticide use by gardeners to combat the most common diseases.</p>	
Additional remarks	<p>Based on observations by the breeder and on the nursery, this outstanding Antirrhinum cultivar is significantly resistant to rust and powdery mildew – both of which are common diseases of the genus.</p>

Plant Name	Salvia coccinea Super Red ('DWSalhybRe-03')	
Entrant	Kernock Park Plants	
Breeder	De Wet Plant Breeders	
Description	<p>This glamour-puss was named for the unusually large, ridiculously bright red flowers which are borne in great number all summer long and into autumn. The flower colour is so luminescent, no picture can do it justice! Easily outperforming older, red-flowered cultivars in the genus with her sheer exuberance and joie de vivre, and effortlessly adding pizzazz to patio and border displays. Let Salvia 'Super Red' bring her high spirits and zest for life to your garden this summer! An outstanding perennial for the summer garden, Salvia 'Super Red' combines vibrant colour with an extended flowering period until the first frosts. The super-sized, tingly-zingy red flowers outshine other cultivars of the type, providing months of theatre in the garden. Salvia 'Super Red' thrives in full sun, showing excellent tolerance to heat, humidity, and drought. Bees and butterflies are drawn to her vivid flowers, making the cultivar an ideal choice for pollinator-friendly plantings. Perfection personified when used in mass-plantings, Salvia 'Super Red' also seizes the spotlight in pots and planters on the patio. Delivering high drama and long-lasting performance with minimal care. Full sun and free-draining soil are preferred. Hardy to about -3C.</p>

Plant Name	Lewisia Sunset Glow ('Marianne')	
Entrant	Kernock Park Plants	
Breeder	Philip Van Hilst	
Description	<p>Destined for greatness - this is a ground-breaking introduction which makes a dazzling addition to any garden. Lewisia 'Sunset Glow' showcases eye-catching, uniquely and intensely red, star-shaped flowers that really pop and massive flowering that is streets ahead of any other Lewisia on the market! The flowering period is exceptionally long, with the first flush appearing in early to mid-spring, and thereafter flowering on repeat in huge quantities until the first frosts. This outstanding herbaceous perennial alpine plant is densely flowering, with a compact habit and forms a beautiful mound in bloom – and unlike many other Lewisia, it grows vigorously to fill containers, making it a great choice for growers and gardeners alike. It is a perfect fit for alpine and rock gardens and will steal the show with its dazzling display in containers and planters on terraces and balconies. Pollinator-friendly and drought-tolerant, it requires minimal to no care while delivering maximum impact. It prefers full sun. Fully hardy to -15C in free-draining conditions. It has even coped outdoors in containers during the wettest winter since records began!</p>	
Special Qualities which Benefit the Consumer	<p>Lewisia 'Sunset Glow' offers the nearest to true red flower colour in the genus and has an exceptionally long flowering period, blooming in huge numbers from spring until the first frosts. This outstanding plant grows vigorously to fill containers, making it a great choice for gardeners. It is perfect for alpine and rock gardens, as well as containers and planters on terraces and balconies. It is pollinator-friendly and drought-tolerant and requires minimal to no care. It prefers full sun. Fully hardy to -15C in free-draining conditions. It has even coped outdoors in containers during the wettest winter since records began!</p>	
Additional remarks	<p>Lewisia 'Sunset Glow' is massively and densely flowering, with a compact habit – leaving other Lewisia trailing in its wake. It will put on a dazzling display in alpine and rock gardens and excels in containers and planters on terraces and balconies. It is drought-tolerant and requires minimal to no care. Fully hardy to -15C in free-draining conditions. It has coped quite happily outdoors in containers during the wettest winter since records began. It prefers full sun.</p>

Category	Herbaceous Perennials	
Plant Name	Nepeta sibirica Serene Wild Orchid	
Entrant	Newey	
Breeder	Dümmen Orange B.V	
Description	Nepeta sibirica (SERENE WILD ORCHID) is a striking and unexpected novelty within the Nepeta genus, introduced by Dümmen Orange. This seedling immediately catches the eye with its unique floral display: elegant, bright pink flowers delicately speckled with tiny pink dots – an orchid-like look rarely seen in this species.	
Special Qualities which Benefit the Consumer	The flowering is not only visually appealing but also ecologically valuable: bees, bumblebees and butterflies are drawn in large numbers, making SERENE WILD ORCHID a strong contributor to biodiversity in the garden or on balconies. It flowers abundantly and continuously from early summer into autumn, all while maintaining a compact, tidy, and sturdy growth habit. Its dark foliage is disease-resistant and remains healthy throughout the season. The plant is drought-tolerant, low-maintenance, and easy to combine in both garden beds and containers.	
Additional remarks	Its dark foliage is disease-resistant and remains healthy throughout the season. The plant is drought-tolerant, low-maintenance, and easy to combine in both garden beds and containers.

Category	Herbaceous Perennials	
Plant Name	Geum hybrid 'Jam Roly-Poly'®	
Entrant	Allensmore Nurseries LTD	
Breeder	Gerrit Lommerse	
Description	This is a compact, clump forming Geum which grows best in full sun or semi-shady locations in moist but well drained soils. Performs well in borders and containers, and will tolerate hard frosts. Geum pollen and nectar is a rich, early food source for various pollinators such as bees, flies and butterflies.	
Special Qualities which Benefit the Consumer	Geum Jam Roly-Poly flowers from April through to August with repeated blooms being encouraged by regularly dead-heading old flowers. This Grand Dessert series will reach a height of 30cm and a spread of 40-50cm, making them ideal for planting in both borders and containers. Would look great in a cottage or informal themed garden. Flowers can be used in fresh cut displays, seedheads used in dried displays, and petals can be dried to create confetti.	
Additional remarks	This is an extremely low maintenance plant which requires no formative pruning, and little deadheading throughout the flowering period. Good for those tricky to plant semi shady/semi sunny areas. Is extremely frost hardy, and will survive most British winters.

Plant Name	Hosta 'Red Ninja'	
Entrant	Fairweathers Nursery	
Breeder	Ninja Kramer	
Description	<p>'Red Ninja' is the worlds most red leaved Hosta. This unique hardy, red-leaved Hosta boasts leaves that are green and overlaid with intense, burgundy-red hues. This stunning plant stands out as the reddest-leaved Hosta available, maintaining its vibrant red colour even throughout summer. With its bright red petioles 'Red Ninja' is perfect for adding colour and texture to any garden. The intensity of its red leaves is enhanced by positioning it in an area that receives some midday sun. From late summer to early autumn the leaves are topped by beautiful purple flowers. Its low-maintenance nature makes it ideal for borders and containers.</p>	
Special Qualities which Benefit the Consumer	<p>Suitable for borders or pots 'Red Ninja' offers a unique new leaf colour within its Genus. It also has the unique quality of enjoying more sun than most Hostas to bring out the intensity of red in the foliage. It will prefer moisture retaining soil. Remove dead leaves in winter after frosts.</p>	
Additional remarks	<p>Great in pots or borders</p>

Category	Herbaceous Perennials	
Plant Name	Agastache hybrida Peach Pearl	
Entrant	Ball Colegrave	
Breeder	Terra Nova	
Description	<p>Agastache Peach Pearl is a stunning new form of hummingbird mint and one of the best new introductions to our range. It blooms continuously from June to September with large peach-orange flowers that are hugely attractive to pollinators - butterflies and bees will flock! Easy to grow perennial. Plant in sheltered spot, in a mixed planted setting, or mixed container, to best indulge in a superb display of long-lasting colour, or enjoy the heady fragrance of the aromatic foliage, which is also very resistant to Downy Mildew. Our 84 plug is best grown in a well drained, fertile soil. These are suitable to grow in 3-litre pot and will grow up to 40cm in height and 30cm spread.</p>	
Special Qualities which Benefit the Consumer	<p>The long flowering time makes these plants outstanding for patio containers, especially standalone summer containers to enjoy the large peach-orange blooms and scented foliage. These are self-cleaning flowers and once the flowers are over, still have the ornamental calyx which remain and are in themselves pleasing to look at. Once established, Agastache Peach Pearl is drought tolerant.</p>	
Additional remarks	<p>Highly resistant to pests and diseases, superb garden plant, great as a signature or focal plant to draw the eye, and perfect to be mixed in borders and planters alike, mix with large leaved perennials or annuals for real impact.</p>

Plant Name	Heuchera sanguinea Heucherette Red	
Entrant	Ball Colegrave	
Breeder	PanAmerican Seed	
Description	<p>"Heuchera Heucherette™ Red is a first-year flowering Heuchera sanguinea and part of the Fleuroselect Gold Medal-winning Heucherette™ series, recognised for its breeding innovation and outstanding ornamental performance. Unlike traditional Heuchera grown mainly for foliage, Heucherette™ Red reliably flowers in the first season from seed, with no need for overwintering or vernalisation. Compact plants produce deep red flower spikes on short, sturdy stems in year one, rising cleanly above bright green leaves with dark veining for immediate retail and garden impact. Flowering occurs naturally from spring to early summer, delivering fast returns for growers and instant appeal for consumers. Designed for part-shade conditions, Heucherette™ Red is ideal for spring containers, shaded borders and mixed spring combinations, offering true perennial value with annual-style efficiency. Performs best under cool conditions and is not intended for high summer heat. Plant our 84 and 180 plugs into 1.5-litre pots."</p>	
Special Qualities which Benefit the Consumer	<p>Heuchera Heucherette™ Red offers the beauty of a perennial with the advantage of first-year flowering, delivering immediate colour without waiting a full season. Compact plants feature deep red flower spikes above attractive green foliage, making them ideal for containers, patio pots and shaded borders. This variety performs best in part shade, prefers well-drained soil, and thrives under cool spring conditions. Easy to maintain, it requires moderate watering and minimal care. Suitable as a tender perennial, Heucherette™ Red provides reliable early flowering and long-lasting garden interest from the first year onward.</p>	
Additional remarks	<p>A neat display in the garden, incorporate as part of spring/summer combinations.</p>

Plant Name	Phalaenopsis Orchidaceae Vintura® Vittoria (PHA1734832)
Entrant	Javado UK
Breeder	Anthura
Description	Vintura® Vittoria is a robust and elegant Phalaenopsis distinguished by its remarkable colour gradient. The soft pastel yellow base harmoniously transitions into a refined, romantic pink edge, creating a subtle yet eye-catching vintage look that appeals to a broad consumer audience. This variety stands out not only for its unique colour expression, but also for its abundance of flowers and well-balanced plant structure. The rich flower count ensures a full and luxurious presentation at point of sale, enhancing its shelf impact and sell-through potential. Vintura® Vittoria is a reliable performer, combining ornamental value with strong plant characteristics suitable for distribution and retail. Its timeless colour palette fits effortlessly into a wide range of interior styles—from classic to modern—making it an easy choice for both florists and consumers. With its combination of unique aesthetics and dependable quality, Vintura® Vittoria offers excellent commercial potential and is a valuable addition to any Phalaenopsis assortment.
Special Qualities which Benefit the Consumer	Vintura® Vittoria offers a combination of aesthetic appeal and ease of care, making it an attractive choice for a wide range of consumers from first-time buyers to experienced orchid lovers. Low maintenance: Requires minimal care compared to many flowering houseplants, ideal for busy consumers. Indoor suitability: Thrives in typical indoor conditions (living room, office), without the need for special environments. Simple watering needs: Generally requires watering once per week, reducing the risk of overcare. No special soil handling needed by the consumer: Delivered in a suitable orchid substrate; no repotting required in the short term.
Additional remarks	N/A

Description	<p>In addition to the stunning mottled pattern on its leaves, this unique variegated Nobile also produces beautiful white flowers with dark pink edges; the flowers have a deep purple centre and smell wonderful. As Dendrobium nobile can tolerate cold temperatures, it is also suitable for patios and terraces, provided the temperature does not fall below 5°C. Due to its large flowers and lovely scent, the Nobile is a plant much loved by bees and butterflies. Please note, due to the absence of photosynthetic cells (variegata), the plant cannot tolerate direct sunlight but prefers shade.</p>	
Special Qualities which Benefit the Consumer	<p>In addition to the stunning variegated pattern on its leaves, this unique variegated Nobile also produces beautiful white flowers with dark pink edges; the flowers have a deep purple centre and smell wonderful. As Dendrobium nobile can tolerate cold temperatures, it is also suitable for patios and terraces, provided the temperature does not drop below 5 °C. Thanks to its large flowers and lovely scent, the Nobile is a plant much loved by bees and butterflies.</p>	
Additional remarks	<p>Please note, due to the absence of photosynthetic cells (variegata), the plant cannot tolerate direct sunlight but prefers shade. Once it has finished flowering, the Nobile will retain its ornamental value thanks to its variegated leaves and the new shoots that grow easily.</p>

Category	Flowering Houseplants	
Plant Name	Euphorbia Tiara Alexandra	
Entrant	Javado UK	
Breeder	Queen Genetics	
Description	With their exceptionally large flowers and striking blooms, these plants are a unique addition to any assortment and are a consumer favorite, flowering beautifully throughout spring and summer.	
Special Qualities which Benefit the Consumer	Beautiful in several pot sizes With its versatility, this plant thrives in various pot sizes, ranging from 10 to 14 cm. Whether for compact displays or larger arrangements, it adapts beautifully. Compact, well branched growth and appearance.	
Additional remarks	No special treatments needed Due to exceptional breeding work, our Tiara Euphorbia requires no pinching or PGR and demonstrates high disease tolerance. Ideal for large-scale productions. Good growth and flowering. Can stand in any place but in a sunny place it does best. Great ornamental value because of the large big pink flowers.

Category	Flowering Houseplants	
Plant Name	Anthurium Andreanum Laguna (AN2347842)	
Entrant	Javado UK	
Breeder	Anthura	
Description	<p>This variety is unique within the white and purple colour segment and represents a completely new offering for larger pot sizes within the range. The striking contrast between the fresh white base and vibrant purple tones creates a modern and eye-catching appearance that stands out at retail level. The colour combination evokes a distinct holiday feeling; the name Laguna®, meaning bay, reflects this perfectly. The plant brings a sense of relaxation and escape into the home, allowing consumers to momentarily imagine themselves on holiday. In addition to its visual appeal, this variety is well suited for contemporary interiors thanks to its clean colour palette and strong presence in larger pot sizes. The plant is easy to combine with other indoor plants and fits both minimalist and more decorative styling.</p>	
Special Qualities which Benefit the Consumer	<p>Laguna combines a unique and refreshing colour contrast with strong decorative qualities, making it an eye-catching and long-lasting addition to the home. Long-lasting flowering providing extended decorative value in the home, Strong visual impact due to the striking white and purple colour combination, Excellent presentation in larger pot sizes, offering a fuller and more premium plant appearance, easy to style within a wide range of interiors, from modern to more decorative settings, Creates a positive atmosphere, with colours that evoke a relaxed, holiday-inspired feeling.</p>	
Additional remarks	<p>Prefers bright, indirect light, requires moderate watering, allowing the growing medium to slightly dry between waterings, thrives best at room temperature conditions, making it suitable for standard indoor environments. The plant is well suited for indoor use and requires no special or complex care, making it accessible for both experienced and novice consumers.</p>

Plant Name	Phalaenopsis 'Manta® Socorro' "PHA318029"	
Entrant	Profitplant	
Breeder	Anthura	
Description	Phalaenopsis Manta® Socorro stands out because of its impressively large flowers (? 9.5 cm) with a unique, flowing 'Manta' silhouette. The combination of flower size, flower shape and bright flower colour is exceptional within the current Phalaenopsis assortment. The long, well-branched flower spikes create a voluminous and luxurious presentation, making it ideal for the premium segment of potted plants. Inspired by the elegant movement of manta rays, this plant combines strength with refinement. This makes Manta® Socorro particularly suitable for premium retail concepts and gift products.	
Special Qualities which Benefit the Consumer	Long-lasting flowering period (approximately 3 months) Strong and robust plant structure Low maintenance requirements (typical for Phalaenopsis) Suitable for indoor use (living and working spaces) Premium appearance, making it ideal as a gift product	
Additional remarks	Uniform plant structure and reliable production Good transportability due to the sturdy flower spikes Excellent presentation in 12 cm and larger pot sizes Suitable for concept sales (Manta® series)

Category	Flowering Houseplants	
Plant Name	Anthurium Andreanum Valentino® (AN2824056)	
Entrant	Javado UK	
Breeder	Anthura	
Description	<p>As the name suggests, the red Valentino® is a plant to fall in love with. The small, heart-shaped red flowers rise elegantly above the foliage, creating a strong visual appeal that immediately attracts attention at the point of sale. This makes Valentino an excellent choice as a gift item, while also offering long-lasting enjoyment for consumers at home. Valentino combines its ornamental value with reliable performance in the chain. The variety has achieved excellent results in the 48-hour transport test at both 4°C and 7°C, ensuring strong resilience during distribution and minimizing risk for export and retail partners. Thanks to its compact and uniform growth, Valentino is highly suitable for efficient production and handling. It performs optimally in pot sizes of 7 cm, 9 cm, and 12 cm, offering flexibility for different market segments—from impulse-driven small gift items to slightly larger, more premium presentations. With its striking colour, consumer-friendly character, and strong logistical performance, Valentino is a dependable addition to any assortment aimed at consistent quality and turnover.</p>	
Special Qualities which Benefit the Consumer	<p>Valentino® offers a combination of aesthetic appeal and user-friendly characteristics, making it an attractive choice for a wide range of consumers. The plant produces medium-sized, heart-shaped red flowers that are clearly visible above the foliage, ensuring a strong decorative value and immediate visual impact in the home. A key benefit is its compact growth habit. This makes Valentino particularly suitable for smaller living spaces and easy placement on tables, windowsills or as a gift item. The compactness also ensures that the plant remains well-shaped and manageable throughout its use in the home. Valentino is also relatively tolerant in less optimal light conditions, meaning it maintains its ornamental value even in locations with lower light levels, such as offices or shaded spots in the home. In addition, early observations indicate a lower sensitivity to thrips compared to standard varieties. While this is primarily a production benefit, it indirectly contributes to a better plant quality reaching the consumer and a longer-lasting attractive appearance.</p>	
Additional remarks	<p>Early observations indicate a reduced sensitivity to thrips compared to standard Anthurium varieties. This is a notable advantage, as it supports consistent plant quality and reduces the risk of visible damage at the consumer level.</p>

Plant Name	Petunia hybrida 'AMAZONAS™ Midnight Finch	
Entrant	Danziger “Dan” flower farm	
Breeder	Danziger	
Description	AMAZONAS™ Midnight Finch is a distinctive petunia from Danziger's AMAZONAS™ collection, created to redefine how petunias are presented and perceived. It brings a bold, rainforest-inspired look with unique bloom coloration, green ruffled flower edges, conic upright flowers and a naturally well-branched, upright habit. The variety is compact yet impactful, suitable for landscape use, patio pots and hanging baskets. Its unusual green-edged flowers add an interesting element to combinations, while its early blooming makes it suitable for a wide range of market windows. AMAZONAS™ Midnight Finch combines striking natural beauty with practical grower value and strong retail appeal.	
Special Qualities which Benefit the Consumer	AMAZONAS™ Midnight Finch offers consumers a compact, decorative petunia with a distinctive appearance and strong garden value. Its unique bloom coloration, green ruffled flower edges and upright habit create an eye-catching look for patio pots, hanging baskets and garden combinations. The variety blooms early enough for any market and is suitable for container growing, making it easy to integrate into seasonal displays. Consumers should grow it in typical petunia conditions, with good light, regular watering and standard seasonal care.	
Additional remarks	AMAZONAS™ Midnight Finch is suitable for hanging baskets, patio pots, landscape use and creative combinations. It is well-branched, upright and compact, with conic upright flowers that give the plant a distinctive presentation. As part of the AMAZONAS™ concept, the variety has been selected for strong outdoor performance and resilience under changing conditions, including sun, wind and rain. No specific pest or disease resistance claim is made here unless confirmed by the technical team.

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Portulaca oleracea Bloomigo Yellow, Orange, Pink	
Entrant	Javado UK	
Breeder	Highlands Potplants/ African Roots	
Description	We have with the new selection of our Portulaca an upgrade in flower size. If we compare our selection to the others it looks like that the flowers are 25% bigger than the older varieties. This follows up that if the flowers are close it still gives colour. What we see also is the colours of the flowers are more bright. The selection grows more upwards, that's why the colour of the leaves are more dark green and fresher. At last with testing of the new selection we see that the flowers goes earlier open and closing later on the day.	
Special Qualities which Benefit the Consumer	Long flower period till October. Bright colours in the flower. Not constantly with his roots in water. Fresh green appearance.	
Additional remarks	Looks nice in pots and in hanging baskets. It's heat resisted and don't need much water. Not sensitive for pests and diseases. As example snails.

Plant Name	Nemesia hybrida NESIA™ Arctic Blue
Entrant	Danziger “Dan” flower farm
Breeder	Danziger
Description	NESIA™ Arctic Blue is a compact, early-flowering Nemesia with heavy flower coverage and a unique light blue color. It produces an abundance of blooms from early spring and continues flowering through spring and summer. Its compact habit makes it ideal for 6-packs and small pots, while its ability to continue growing and filling larger containers adds flexibility for 15–18 cm pots, patio pots and landscape use. The variety is more heat tolerant than other Nemesia on the market and offers strong garden performance.
Special Qualities which Benefit the Consumer	NESIA™ Arctic Blue offers consumers a fresh light blue color, abundant flowering and a compact habit that works beautifully in containers, patio pots, 6-packs and garden planting. It blooms early in spring with heavy flower coverage and continues to perform into the warmer season thanks to improved heat tolerance. The variety is suitable for 15–18 cm pots, patio pots and packs, and is also pollinator friendly. Its soft fragrance and long flowering period make it an attractive choice for adding color, scent and seasonal freshness to outdoor spaces.
Additional remarks	NESIA™ Arctic Blue has a compact, mounded habit and is suitable for landscape use, 15–18 cm pots, patio pots and 6-packs. It blooms in early spring with heavy flower coverage, is more heat tolerant than other Nemesia varieties on the market, and continues to grow to fill larger pots. The variety is pollinator friendly and well suited for spring and summer flowering displays.

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Diascia barberae Trinity™ Blush	
Entrant	Danziger “Dan” flower farm	
Breeder	Danziger	
Description	<p>TRINITY™ Blush is a groundbreaking Diascia barberae variety bred to bring stronger garden performance, improved plant structure and a premium flowering display to the modern container and basket market. It features exceptionally large flowers in a refined white-to-light-pink colour palette with a distinctive pink eye. The plant has a naturally branched, upright-to-semi-trailing habit with sturdy, thick branches that help prevent splitting or collapsing - a common weakness in traditional Diascia varieties. It offers strong tolerance to early spring cold and summer heat, supporting a long flowering window from spring through late summer and into autumn. Its abundant flowers are attractive to pollinators, and its compact, well-branched habit makes it especially suitable for premium patio containers, mixed planters and hanging baskets.</p>	
Special Qualities which Benefit the Consumer	<p>For consumers, TRINITY™ Blush offers a long-lasting, low-maintenance flowering plant with a soft and elegant colour effect. It flowers continuously from spring through summer, performs well in containers and hanging baskets, and maintains a stable, attractive habit without becoming brittle or collapsing. Its tolerance to weather fluctuations makes it easier for gardeners to succeed, even in changing spring and summer conditions. Best used in a sunny to partially shaded position, in well-drained growing media, with regular watering and standard container plant care.</p>	
Additional remarks	<p>The variety was selected for overall crop reliability, strong branching and resilience under low-temperature and high-temperature conditions. Its natural habit can reduce the need for PGRs and manual pinching in production. TRINITY™ Blush is particularly suitable for patio containers, mixed planters and hanging baskets, where its upright-to-semi-trailing habit and large flowers create a full, premium presentation. It has been tested under commercial growing conditions across Europe and North America, including outdoor production and minimal-heating greenhouse environments.</p>

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Alstroemeria hybrida Inticancha® Liliana	
Entrant	Ball Colegrave	
Breeder	HilverdaFlorist	
Description	For growers: The Alstroemeria Inticancha® Liliana is grown from Rhizomes and supplied in a 40-cell tray. The growing time is early spring, with peak deliveries from week 7 to 15. Cultivation time is around 15 weeks on a 19cm/3 litre pot. For consumers, this variety flowers continuously from spring until the first frost. It is possible to pull out flowering stems and put them in a vase. Doing so, also stimulates the Rhizome to create new shoots. Alstroemeria quite like water, it is best to keep the soil moist.	
Special Qualities which Benefit the Consumer	Alstroemeria Inticancha® Liliana produces elegant, long lasting big flowers for borders, and container plantings. It has a compact, tidy growth habit and flowers continuously through summer with good repeat blooming. Pulling out flower stems rather than cutting stimulates the Rhizome to create new shoots. Best grown in fertile, well drained soil in sun or partial shade, with regular watering during dry weather to encourage repeat flowering. Young shoots may attract slugs and snails in spring, so protection with slug barriers, wildlife friendly pellets, or regular checks is recommended. Once established, plants are hardy, reliable, and easy to maintain.	
Additional remarks	Highly resistant to pests and diseases, superb garden plant, great as a signature or focal plant to draw the eye, and perfect to be mixed in borders and planters alike, mix with large leaved perennials or annuals for real impact.

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Angelonia angustifolia Archangel Light Pink	
Entrant	Ball Colegrave	
Breeder	Ball FloraPlant	
Description	<p>Angelonia Archangel has the biggest flowers for big visual impact, even from a distance! Light Pink brings a much lighter colour to the collection. The generous blooms rise above glossy, dark green foliage. Compact, well-branched and sturdy plants with uniform habit and flowering time, make production in 2 litre pots easy from our 128 plugs. High light will significantly improve plant quality by encouraging branching, earlier flowering and the ideal plant habit growth. Best suited to mid-to-late spring and summer. Angelonia is a warm season crop; Archangel will thrive in heat. The huge flowers smother stems for big impact at retail. Ideal for patio containers, mixed planting and borders in full sun.</p>	
Special Qualities which Benefit the Consumer	<p>A romantic colour with stunning, soft pink flowers. Outstanding in patio containers, mixed or mono plantings. Top-performing, heat-loving and low maintenance.</p>	
Additional remarks	<p>Great heat and summer performance with continual flowering in patio containers.</p>

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Bidens ferulifolia Bee Happy Trailing Orange Eye	
Entrant	Ball Colegrave	
Breeder	Ball FloraPlant	
Description	<p>Super showy bicolor flowers further enhance the Biden offering with golden yellow flowers presenting a striking red halo at the centre. A great choice for patio, baskets and mixed combinations. The well branched semi-trailing habit enables it to weave particularly well through other plants to add to the mixed effect. Suitable for growing in a 9cm to 15cm pot. Makes an excellent ingredient for mixing or used in its own right. Will be available in a 84 and 180 plug tray format. Height 25, spread 35cm.</p>	
Special Qualities which Benefit the Consumer	<p>Eye-catching vibrant single yellow-orange bicolor with concentrated red central ring, really draws attention and stands out in the garden amongst other plants. A strong and complementary variety for use in any mixes. Has a controlled pot habit at retail, but once planted in patio containers or baskets, continues to grow and flourish. Excellent for attracting pollinators, such as bees and butterflies.</p>	
Additional remarks	<p>Great heat and wet weather tolerance.</p>

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Calibrachoa hybrida Cabaret® Early Purple Kiss	
Entrant	Ball Colegrave	
Breeder	Ball FloraPlant	
Description	Lights, camera, action! Cabaret® Early Purple Kiss is an exciting novel addition to the Calibrachoa Cabaret® series. This beautiful stand-out new colour continues to enhance a fantastic line up. The 'Early' part of the name means plants will flower under short days, a great benefit to the grower who can therefore start getting colour on the plants sooner! The Cabaret® series is renowned for being strong in peat free substrates as it has an ability to cope better with higher pH and EC. This was one of the key breeding goals more than a decade ago to develop a Calibrachoa that performed even in hard water areas. Cabaret® Early Purple Kiss is no exception making it future ready for the industry. The delicate soft mauve and punchy purple halo is a 'must have', ideal for mixing in baskets or containers or being bold and making mono planters! Our 84, 128 and 180 plugs suit 9-10.5cm pots, patio and basket promotions.	
Special Qualities which Benefit the Consumer	With its additional vigour, this is a great performer for the consumer in both baskets and patio containers giving a bigger display throughout summer until frosts. The exceptional bicolour flowers make this really stand out.	
Additional remarks	Easy to grow and free branching, plants continue to grow, fill and spread through once potted up. Will fill and flower neatly in the pot enabling it to present a very tidy high impulse plant for retail sales. Suitable for mixes or on its own for 9-15cm pots.

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Petunia hybrida Viva Double Purple Vein	
Entrant	Ball Colegrave	
Breeder	Kerley & Co	
Description	Patio double series. Early flowering, mounding double Petunia with great weather tolerance. Medium compact plant habit?. Highly attractive, full purple flowers, with elegant rich veining, produced over lush green foliage. Daylength neutral, excellent pot performance. Our 128 plug suits 10.5-12cm pots. Plants suitable for pots and hanging baskets, in particular. Will all also add value in mixed component? displays.	
Special Qualities which Benefit the Consumer	A spectacular performer for the consumer in both baskets and patio containers giving a beautiful and appealing display throughout summer. The exceptional frilly purple flowers are simply gorgeous.	
Additional remarks	Easy to grow plants with strong garden performance and super colour power for the patio and exception as a basket item.

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Calibrachoa Oasis Orange Firefly	
Entrant	Beekenkamp Plants	
Breeder	Beekenkamp Plants	
Description	<p>Calibrachoa Oasis Orange Firefly is a flowering annual within the Calibrachoa Oasis series. It produces a high number of small, trumpet-shaped flowers in a distinctive orange tone. The plant has a compact to semi-trailing growth habit and is suitable for production in pots, hanging baskets, or direct planting in the ground. The variety is part of an early-flowering series, allowing growers to schedule production efficiently. Production time is approximately 6–12 weeks, with availability from week 48 to week 18.</p>	
Special Qualities which Benefit the Consumer	<p>Special qualities & consumer benefits Long flowering period throughout the season under suitable conditions Produces a dense display of small, trumpet-shaped flowers Compact to semi-trailing habit, suitable for hanging baskets, containers and garden beds Easy to maintain with standard care for Calibrachoa Attracts pollinators such as bees and butterflies. Points to consider for consumers: Requires well-drained soil Regular watering is needed; avoid waterlogging Benefits from regular feeding for optimal flowering Best performance in a sunny to semi-sunny position</p>	
Additional remarks	<p>Calibrachoa Oasis Orange Firefly is suitable for a wide range of outdoor applications, including mixed containers and hanging baskets. The semi-trailing habit makes it versatile in design. The variety performs well under typical spring and summer conditions and is suitable for outdoor retail programs. Like most Calibrachoa, it performs best in well-drained substrates and moderate weather conditions. Differences in tolerance to prolonged wet or dry conditions should be managed according to standard Calibrachoa cultivation practices. No specific pest or disease resistances are claimed beyond standard crop performance.</p>

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Petunia Tea Rosette Blend	
Entrant	Beekenkamp Plants	
Breeder	Beekenkamp Plants	
Description	<p>Petunia Tea Rosette Blend is an upright petunia with a compact and well-branched growth habit. The plant produces medium-sized flowers with a soft yellow-cream background colour and a clearly defined dark purple centre. It flowers early and continues to produce blooms consistently throughout the season. The plant develops a uniform structure with even flower distribution across the canopy. Petunia Tea Rosette Blend is suitable for use in pots, containers and mixed combinations, where an upright and controlled growth habit is required. It performs reliably outdoors and shows good tolerance to rain. Production time is approximately 6–11 weeks, with delivery from week 44 to week 20.</p>	
Special Qualities which Benefit the Consumer	<p>Early flowering and continuous blooming throughout the season, providing long-lasting colour. Upright and compact growth habit, suitable for pots, patio containers and structured mixed plantings. Produces a well-branched plant with even flower coverage, giving a full appearance without gaps. Good rain tolerance; flowers recover well after wet weather, maintaining visual quality. Low maintenance under normal growing conditions. Suitable for outdoor use on balconies, terraces and in gardens. Performs best in well-drained soil or substrate and benefits from regular feeding typical for petunias.</p>	
Additional remarks	<p>Good overall garden performance, including high tolerance to rain. Upright habit makes it suitable for combinations without overgrowing companion plants. No specific unusual sensitivities to pests or diseases observed beyond standard Petunia cultivation. Best grown in well-drained substrate and with regular feeding typical for petunias.</p>

Category	Annuals, Tender perennials and container & basket plants	
Plant Name	Petunia × hybrida 'Allegra Orchid Vein' F1	
Entrant	Branded Garden Products	
Breeder	Renato Farao Srl Società Agricola in Sarno, Italy	
Description	Petunia Allegra Orchid Vein redefines what a petunia can be. Unlike standard bedding petunias, it combines very large, fully double, frilled flowers with long, strong upright stems that make it suitable as a genuine cut flower. It can reach around 1.5m, flower for up to five months, and carry as many as 20 blooms per stem, while its male-sterile flowers self-clean, removing the need for deadheading. Its orchid-lilac blooms, marked with darker veining, add another layer of distinction. This combination of height, vase use, floral form and garden performance is highly unusual in Petunia.	
Special Qualities which Benefit the Consumer	It can reach around 1.5m, flower for up to five months, and carry as many as 20 blooms per stem. Excellent vase life in your homes.	
Additional remarks	Petunia Allegra Orchid Vein is easy to grow in a sunny, sheltered spot in fertile, well-drained soil or a large container. Start plants warm and frost free, then harden off before planting out after the last frosts. Unlike standard petunias, this is a tall, vigorous type, so it may benefit from support, especially in borders or exposed sites. Pinching young growth can help create bushier plants with more flowering stems. Its male-sterile blooms are self-cleaning, so there is no need to deadhead, which reduces routine maintenance. With long, sturdy stems and a vase life of around 7 to 10 days,

Plant Name	Anisodonteia Carnival Lights® Candy Apple ('IB201-7'PBR)	
Entrant	Javado UK	
Breeder	HybredX Pty Ltd	
Description	The Anisodonteia Carnival Lights series adds larger, longer-lasting flowers to the current range. These medium-compact shrubs bear an exceptional amount of flowers over a very long flowering season from May through to autumn. The Carnival Lights series is ideal for patio and terrace and has low water requirements with excellent drought resistance once An upright, tidy habit and easy pruning, makes the Carnival Lights series easy to manage and suitable for topiary, containers, terraces, or landscapes in warmer climates. Bees and butterflies are drawn to the abundant blooms, adding biodiversity value alongside the visual appeal of these beautiful colours..	
Special Qualities which Benefit the Consumer	The Anisodonteia Carnival Lights prefer a spot in full sun in fertile, well-drained soil. With an upright, dense habit, they grow up to 80-100 cm high and 40-60 cm wide. The Carnival Lights are hardy up to -4 °C.	
Additional remarks	Drought resistant, long-flowering patio plant, striking flower colour.

Plant Name	Pelargonium Isko Lemon	
Entrant	Javado UK	
Breeder	Koos Bruinen	
Description	<p>The Pelargonium Isko Lemon is a fragrant tender perennial. The unique selling points: intensely scented foliage. When the leaves are bruised or brushed against, they release a strong, refreshing lemon citrus aroma that naturally repels mosquitoes. Growing in containers allows placement on patios, balconies, or near seating areas to maximize enjoyment of scent and maximize mosquito protection. Leaves are widely used to flavor teas, desserts, and jellies, and extracted for high-end perfumery essential oils. It features deeply crinkled, lobed green leaves with a rough texture. During spring and summer, it produces small, delicate lavender-pink flowers with darker purple markings that attract bees, butterflies, and hoverflies throughout the summer. It is perfectly suited for container growing, pots, and hanging baskets.</p>	
Special Qualities which Benefit the Consumer	<p>It features deeply crinkled, lobed green leaves with a rough texture. Plant Name	Bidens 'Electric White XXL'	
Entrant	Kernock Park Plants	
Breeder	Proven Winners Europe	
Description	<p>Don't let anyone claim that size doesn't matter... because in this case, it absolutely does. With this outstanding new introduction, gardeners can look forward to truly monster-sized blooms that transform pots and planters. Born from the cutting-edge Proven Winners breeding programme, this cultivar delivers not only record-breaking flower power but also the reliability gardeners crave: robust growth, impressive drought tolerance, and excellent disease resistance. Sun-loving Bidens 'Electric White XXL' thrives in full sun yet remains perfectly content with a touch of shade. Throughout late spring and well into summer, it produces a profusion of creamy-white flowers with glowing golden centres, each one a magnet for pollinators and a bright highlight in any display.</p>	
Special Qualities which Benefit the Consumer	<p>Gardeners expect great performance from their plants and Bidens 'Electric White XXL' does not disappoint. MASSIVE creamy-white flowers from the get-go, and in huge quantity, spilling out from pots and planters. Robust in nature, drought tolerant, and with good disease resistance – great gardening just got a whole lot easier.</p>	
Additional remarks	<p>Use Bidens 'Electric White XXL' in pots and planters, on balconies and on patios, or in beds and borders – wherever they are used, they will brighten the space.</p>

Plant Name	Jamesbrittenia Jammin' 'Coral'	
Entrant	Kernock Park Plants	
Breeder	Proven Winner Europe	
Description	<p>WARNING: You may need sunglasses to view this plant! This revolutionary new selection of genus Jamesbrittenia will blow you away. The first of the Jammin' series and what a lead-out cultivar this is! Jammin' 'Coral' brings the sun, whatever the weather. This heat-tolerant South African native has seemingly been on the cusp of greatness for years, but has never quite broken through with the right combination of plant performance and beauty. Well, Proven Winners have finally cracked the code - Jamesbrittenia just got robust! The brightest of bright pink petals surround a delicate yellow centre. The flowers are so startling, so vivid, they will be shouting out to consumers from garden centre benches "PICK ME! LOVE ME! TAKE ME HOME!". Great in landscapes with good drainage and in containers of all kinds - they make wonderful components in combinations. Brilliant performance on the patio and outstanding in troughs and planters. Repeat-flowering throughout the summer months. No need to dead-head - just sit back and enjoy! Easy-care. Low to no maintenance. Heat and drought tolerant. Full sun and free-draining soil/media.</p>
